01 // DIRECTIVE

I build products end to end: schema, server, interface, tests and deployment. My largest is care-records software designed around the night shifts I work myself. If staff can't trust it at 3 a.m., it isn't finished.

02 // EVIDENCE

SUPSTAFF · CARE RECORDS FOR SUPPORTED LIVING

Next.js 16 · Drizzle · Neon Postgres · Auth.js · github.com/TN1DG/supstaff

- Replaces paper handovers, the medication record (eMAR), night checks and building reports. Deployed on Vercel.
- Zod-validated server actions write each change with its audit row in one transaction; four roles enforced on the server; Argon2-hashed signing PIN.
- Concurrent handover edits are rejected, never silently overwritten. Salesforce sync is queued through a transactional outbox.

SWOLE · LIVE AT SWOLE.DAY

React · Vite · TypeScript · Convex · github.com/TN1DG/swole

- 25-table reactive backend: live queries keep an in-progress workout in sync across devices with no refetch code.
- Feed, friends, chat and challenges, with email-code auth, CAPTCHA on sign-up and rate limits on every costly action.
- Installable PWA; 441 tests gate CI on dev → staging → main.

BISRIDE · DELIVERY MARKETPLACE, LAGOS

Expo React Native · Firebase · Supabase · Zustand

- Riders bid on deliveries; real-time chat, live GPS tracking and role-based dashboards.

FX RISK CHECKLIST · PRE-TRADE DISCIPLINE

- React app with 50-step undo/redo, compressed shareable presets and 44 Playwright tests.
